

**CITYTAPS**

# Managing your **CASHFLOW**

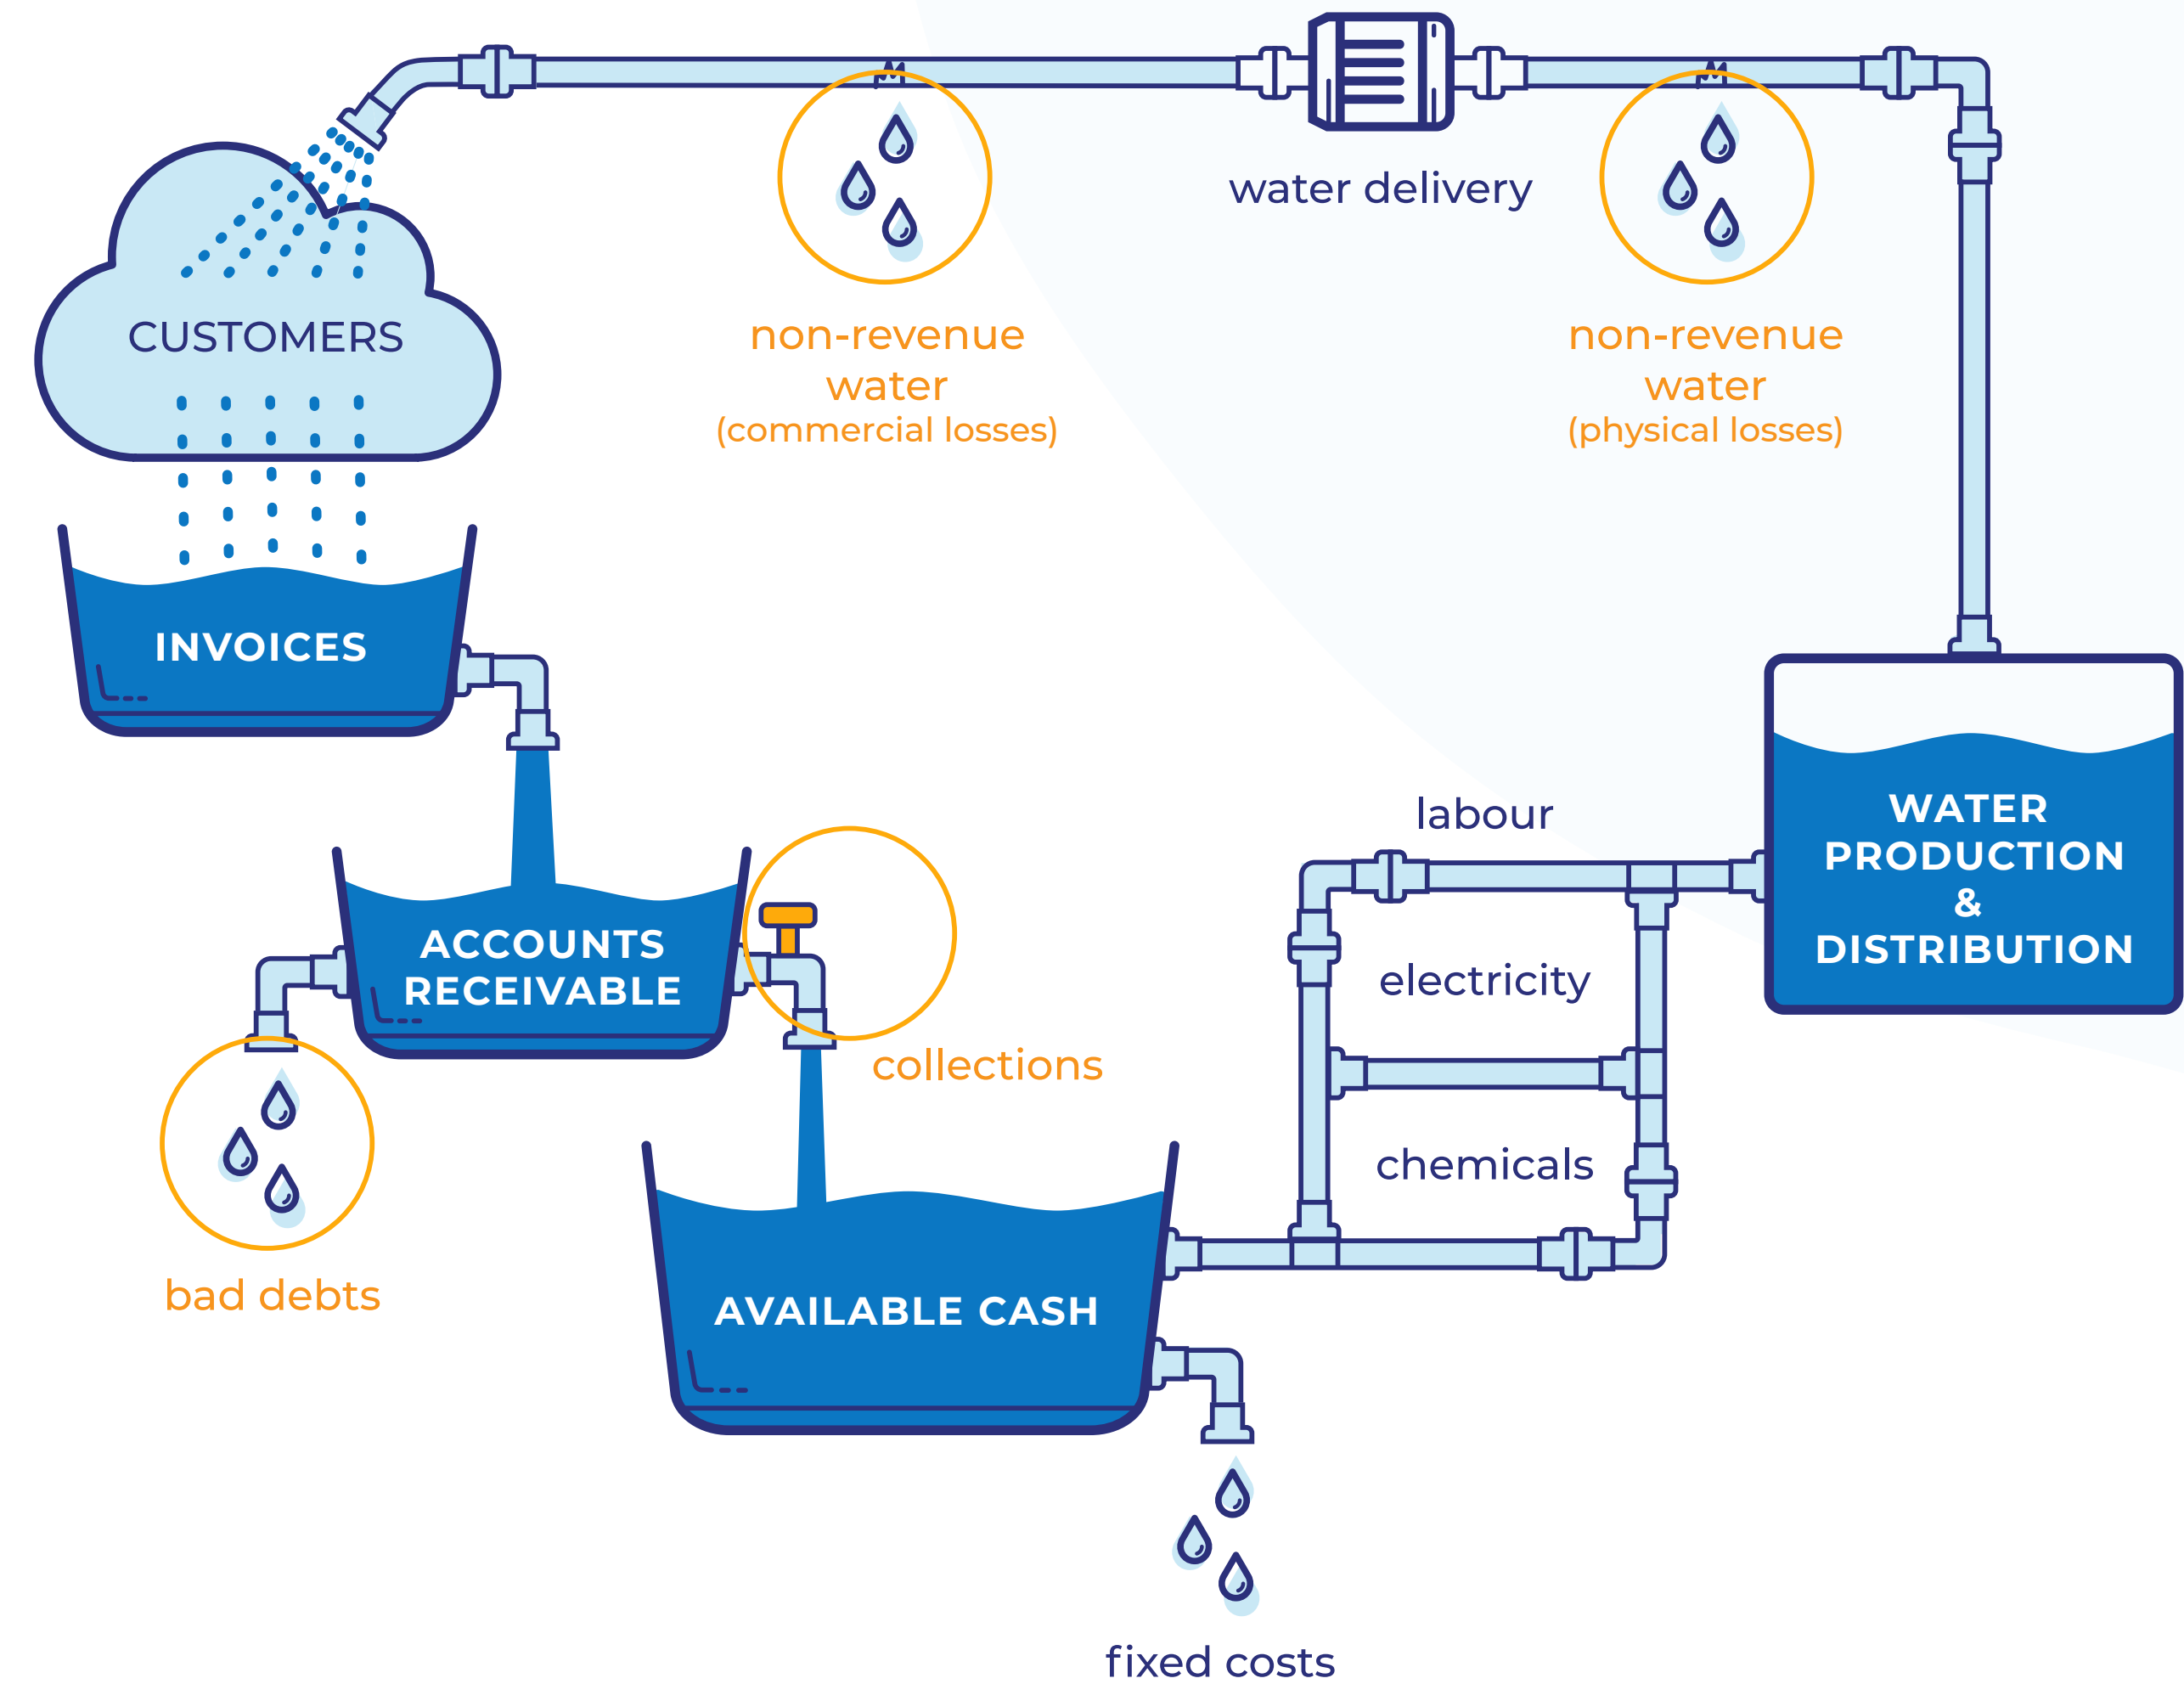

For sustainable operations, managing your **cash flow** is as vital as managing your **water flow**.

CityTaps offers a unique **SMART, PAY-AS-YOU-GO** solution.

**PAYGO** to avoid debts and eliminate accounts receivable.

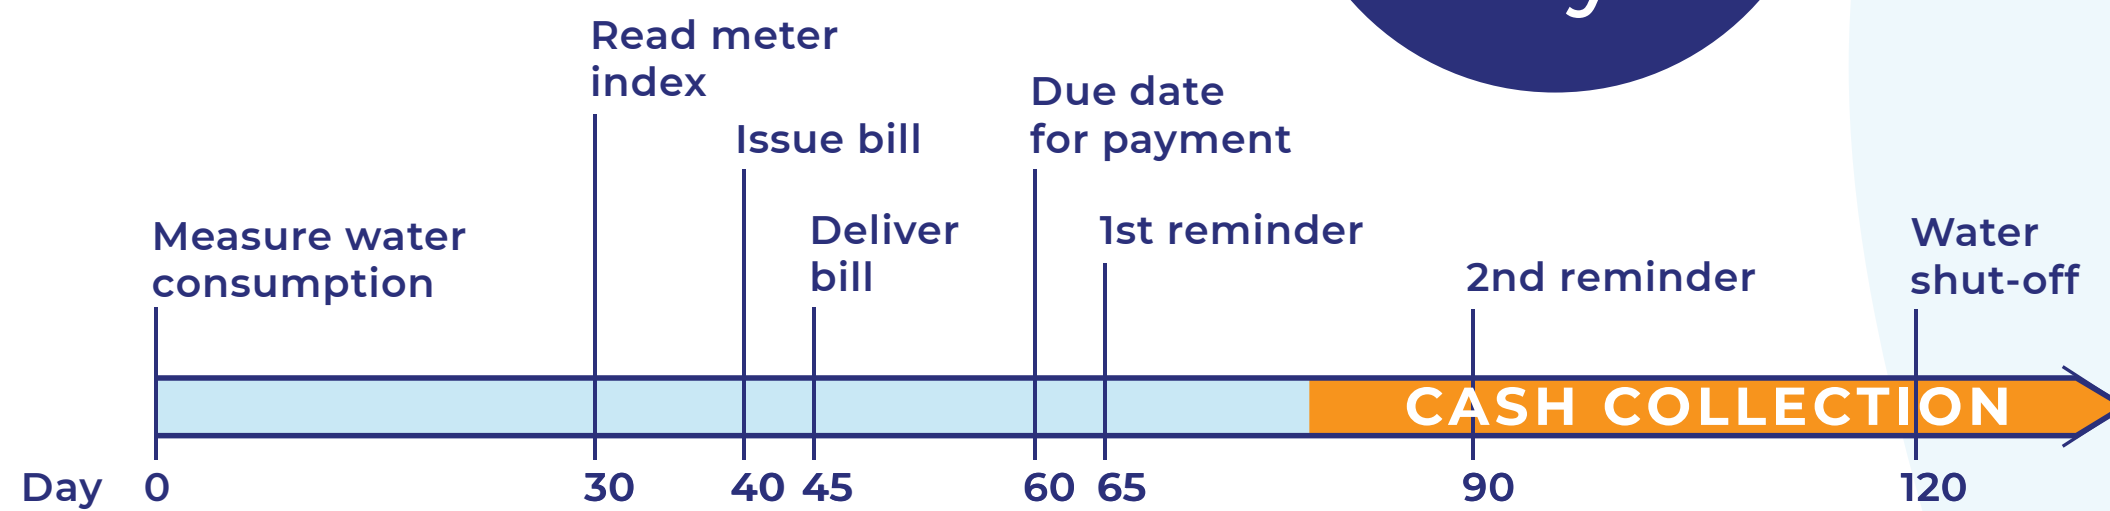

**SMART** metering to quickly identify NRW causes and take corrective actions.

# Meter-to-Cash Process is **OPTIMIZED**

> Doing things the old way

Average customer receivables  
**80 days**

> The Optimized Process:  
The CityTaps Way

Average advance payment  
**15 days**

# Real-time **BILLING**

Subscribers can top up their “water wallet” at any time and for any amount.

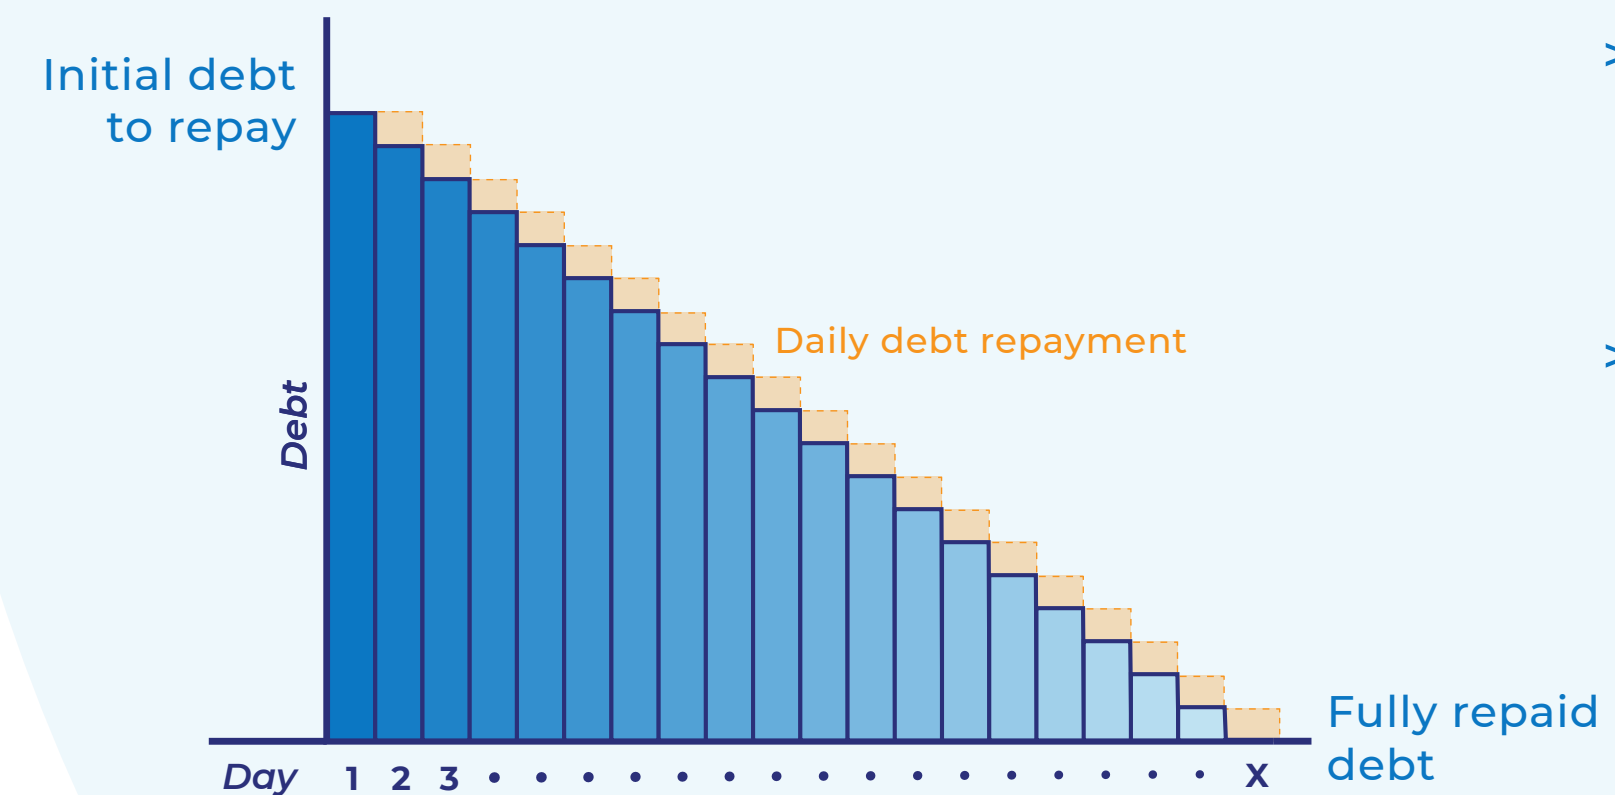

Debits are made in strict compliance with the regulated tariffs:

- Step tariffs
- Block tariffs
- Monthly fixed tariffs

Tariffs can be changed at any time from the management software.

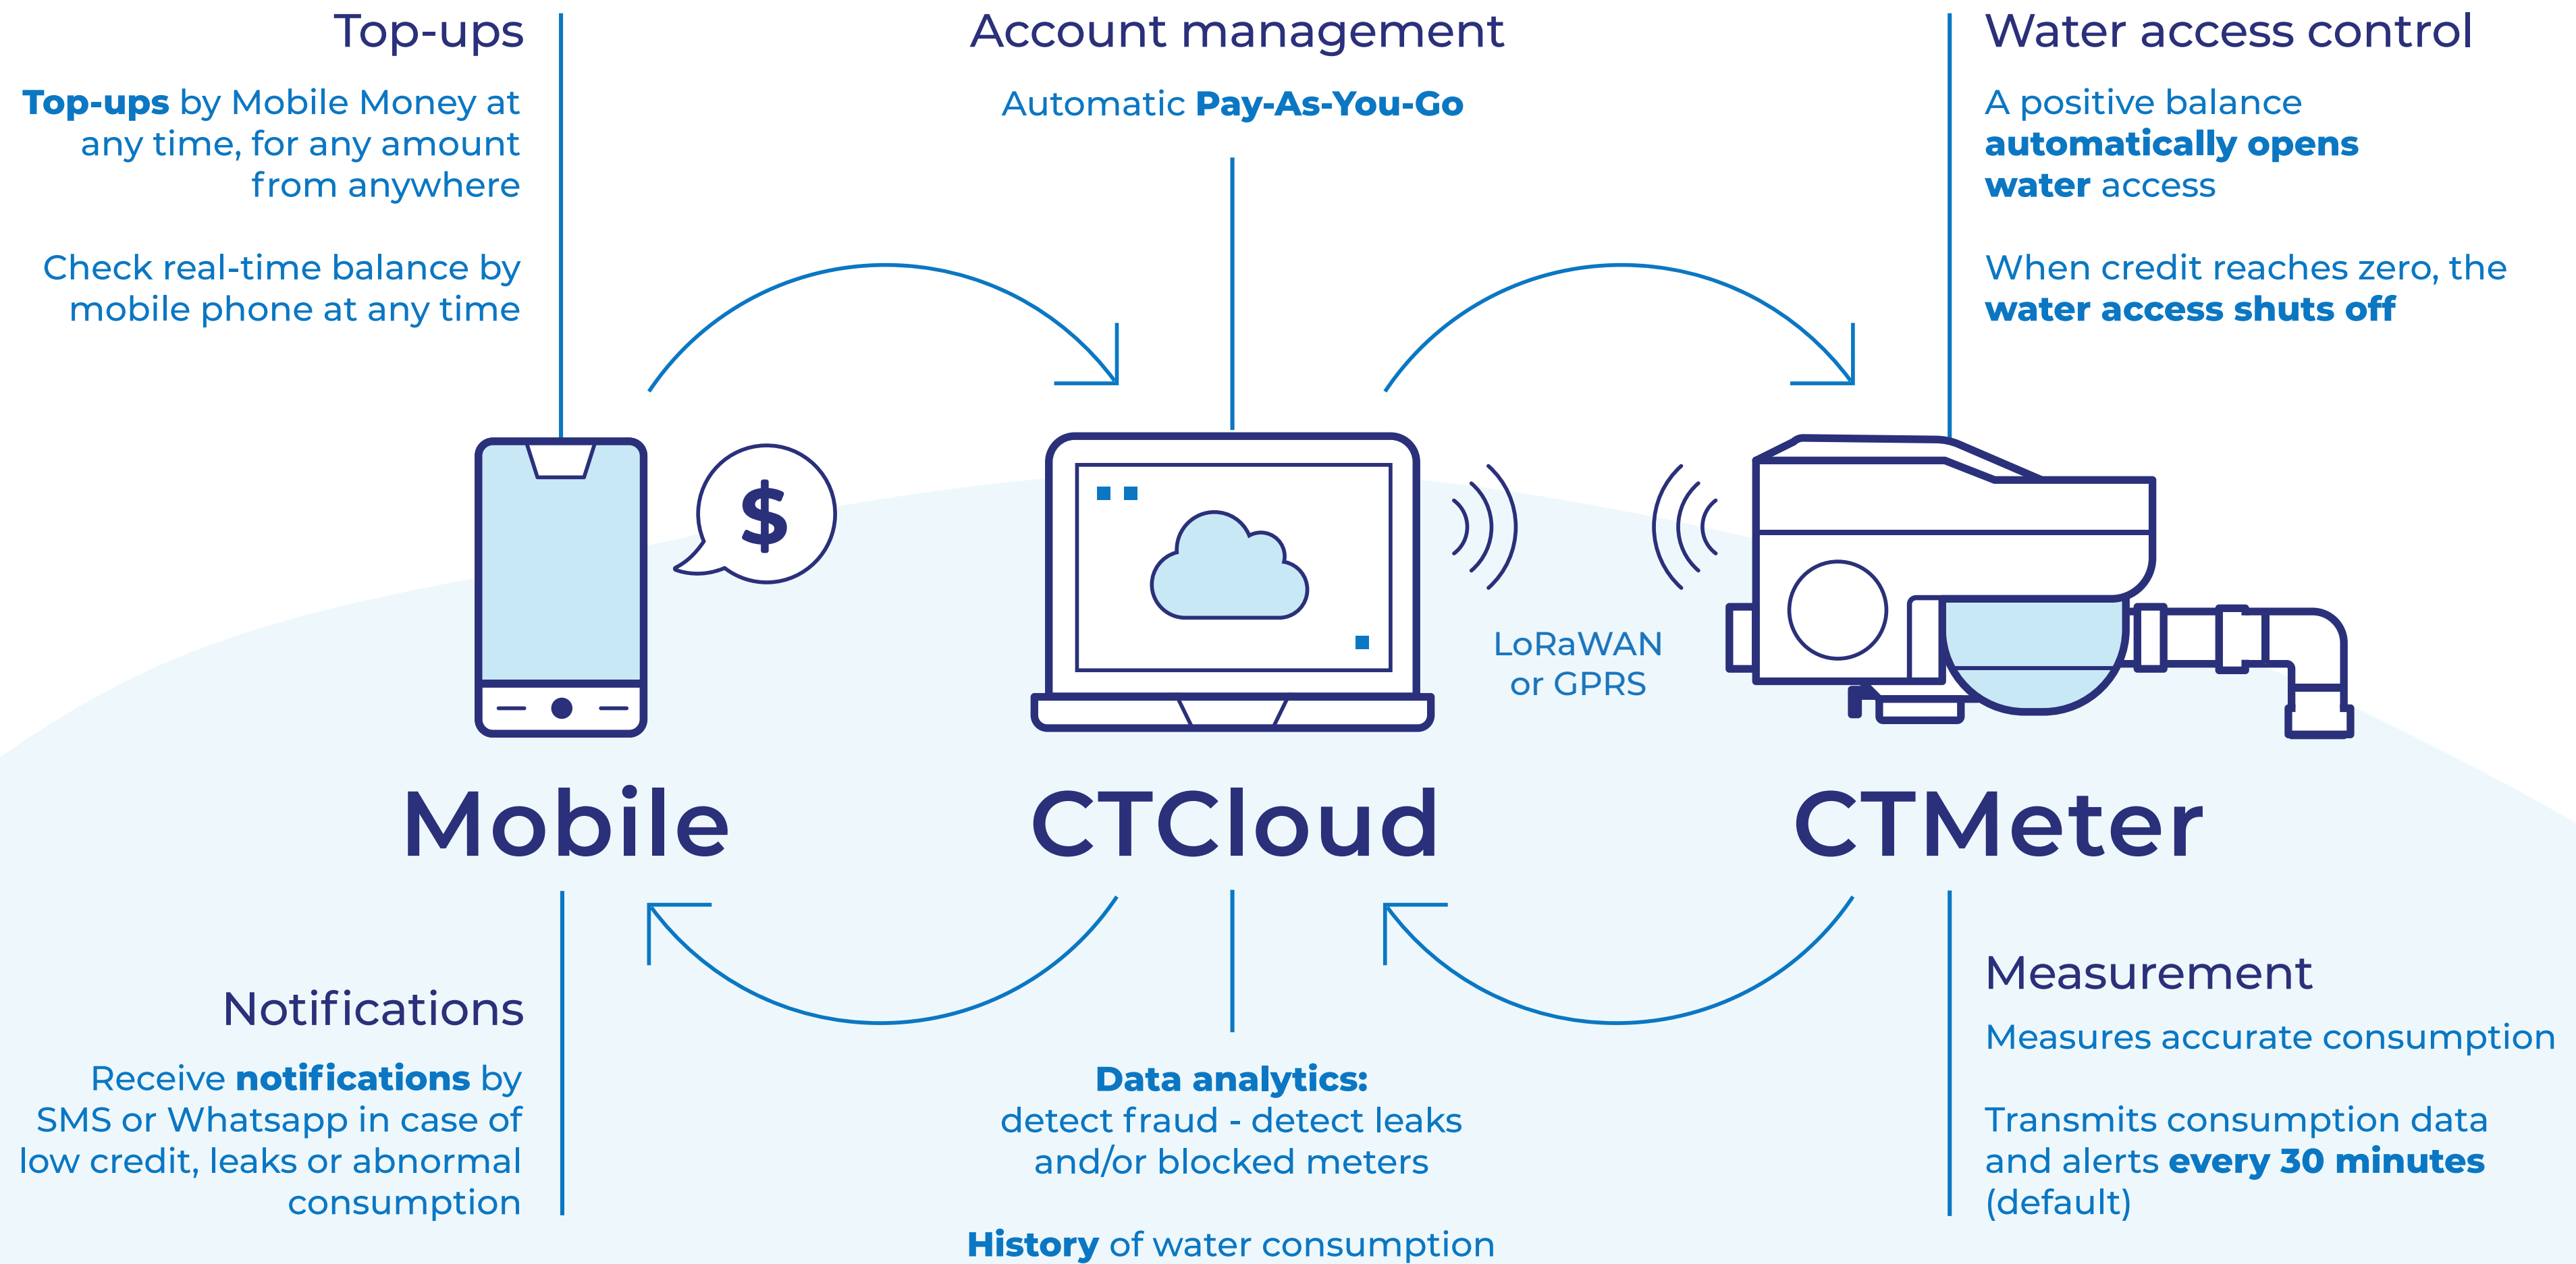

# Debt Repayment **SCHEDULE**

> Define individualised debt repayment plans for each subscriber.

> Follow the individual or global progress of debt repayment.

# CityTaps **SOLUTION**

# Why choose **CITYTAPS?**

## 1.

### **AWARD WINNING SOLUTION**

CityTaps' solution is designed with and for water professionals:

- ▶ the software interface is comprehensive and very intuitive to operate
- ▶ the hardware is manufactured for use in harsh outdoor environments (can be installed in Sahel countries for example) and can resist direct sunlight, high peak temperatures, fine desert dust, etc.

CityTaps has received multiple awards and a patent.

## 2.

### **FINANCIAL SUPPORT**

CityTaps' Business Development team supports utility managers to define the project scope. Together, we focus on your unique business environment and corporate objectives. CityTaps build a dedicated business model based on the utility's inputs to confirm the expected Return-on-Investment.

When required, CityTaps can help provide financing such as grants and leasing contracts.

## 3.

### **INTEGRATION**

New solutions are integrated smoothly with systems already in place.

CityTaps' experienced Technical team will help you integrate the prepayment software with local Mobile Money operators (or other digital payment systems), local bulk SMS providers and with your existing ERP. Our services include a set-up phase to customize the software to your local environment (currency, billing plans, customer notifications, etc.) and a support phase to train and assist your team with the deployment of meters and radio infrastructure.

## 4.

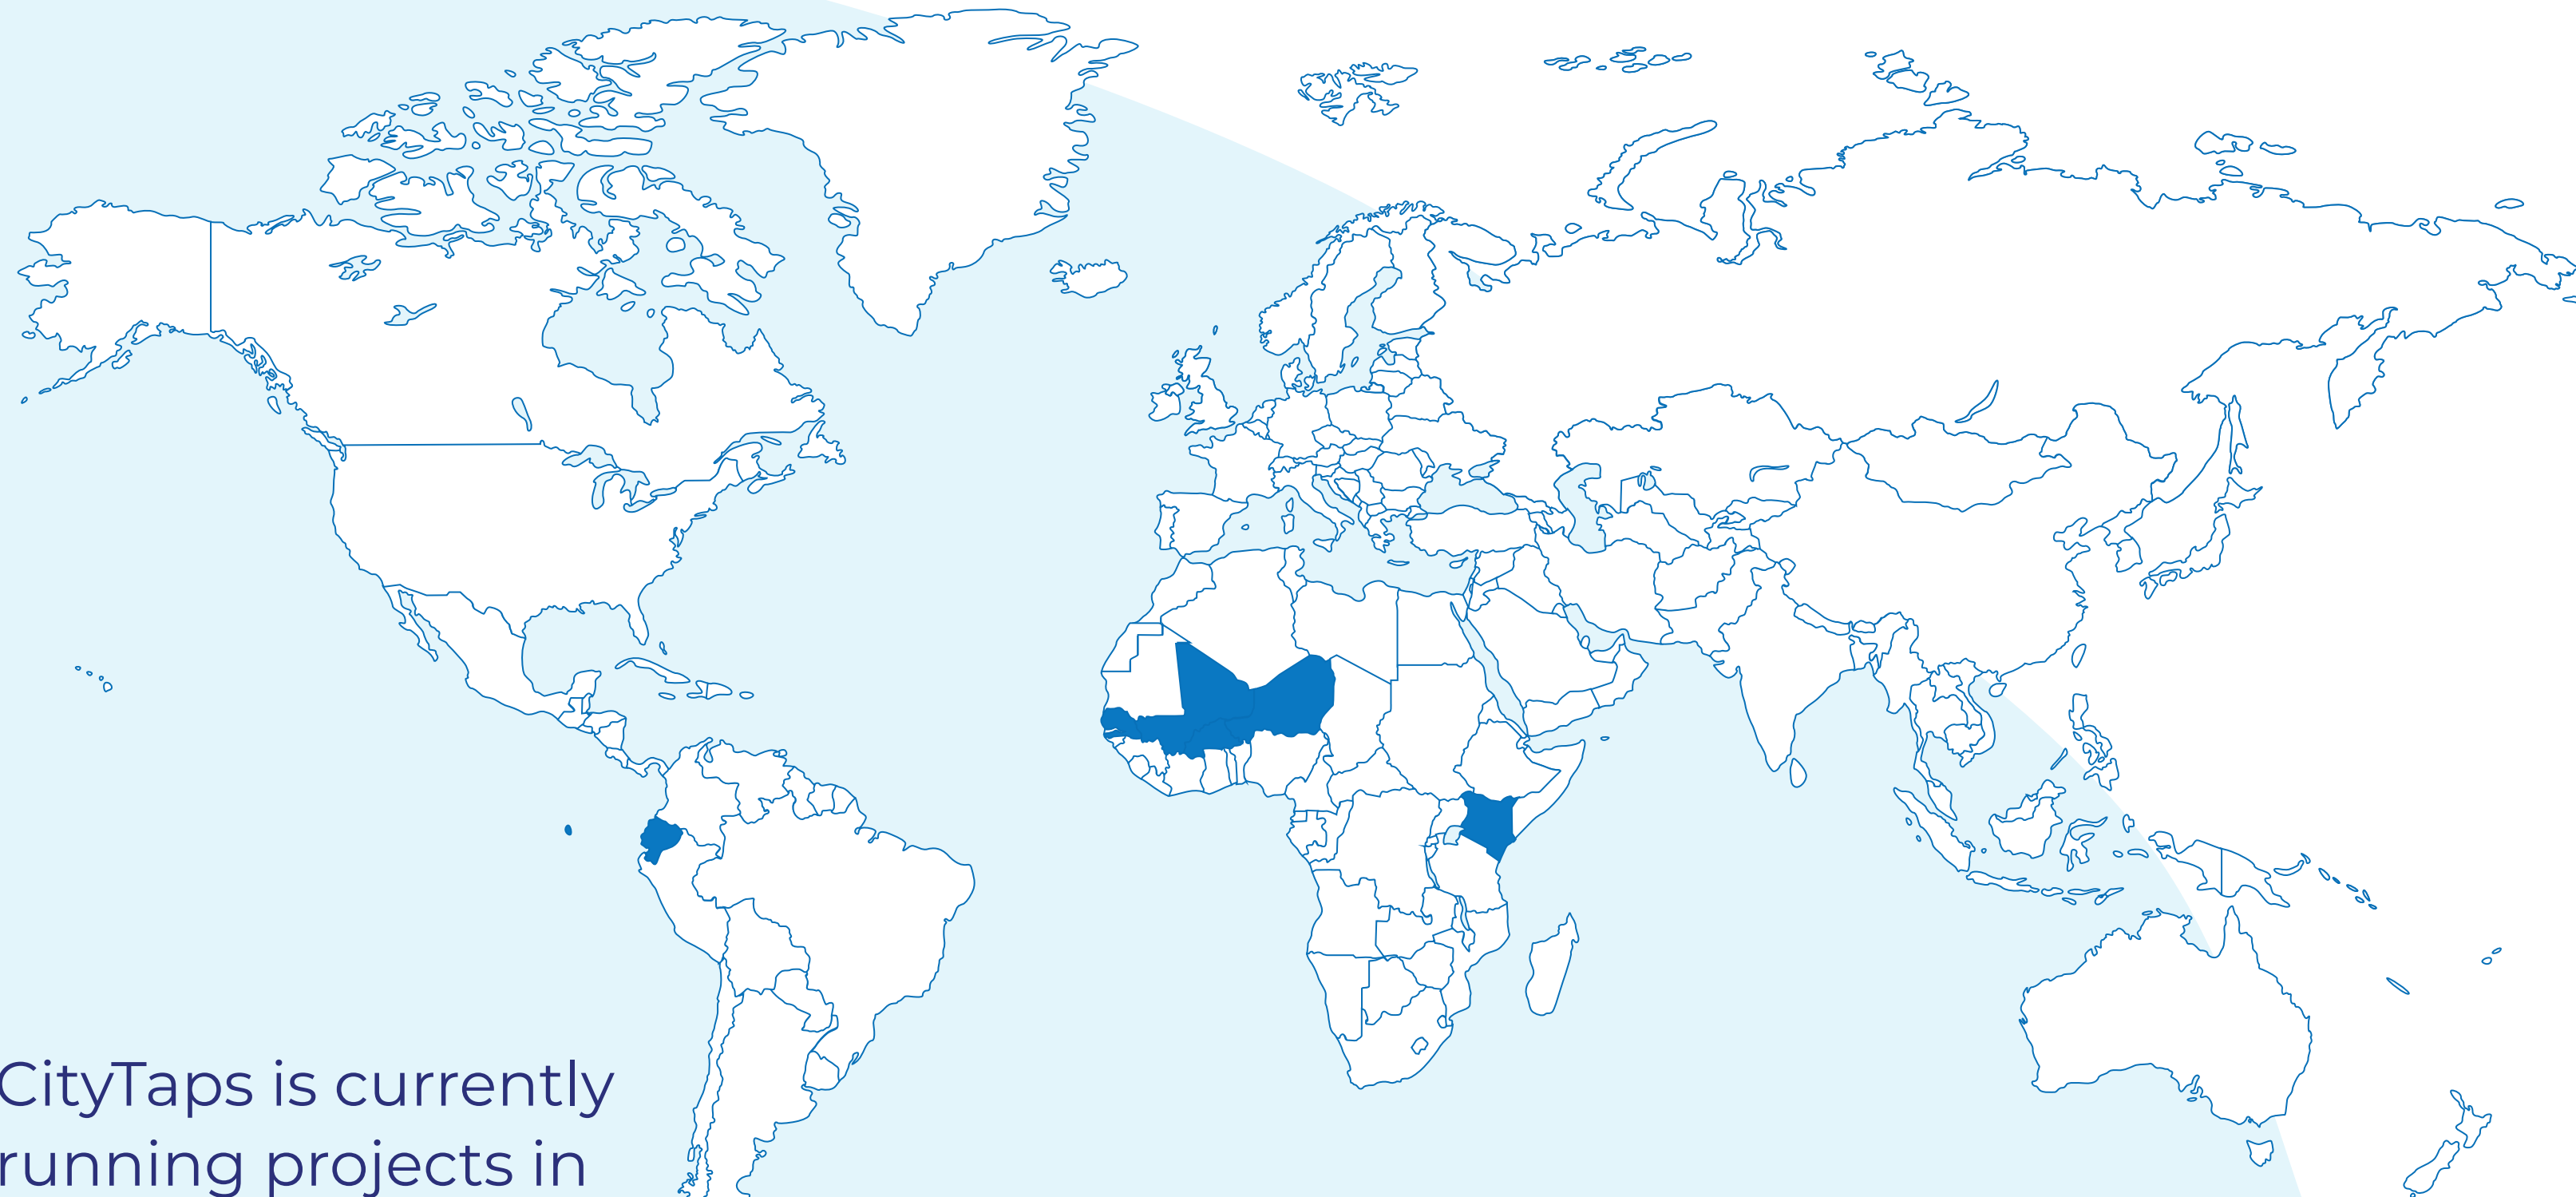

### **LIFETIME COSTS**

Water metering solutions are a valuable asset so they must run without surprises or hidden costs over their 10 year lifetime.

CityTaps offers long-term services to operate and support the solution, such as software operations on secured servers, data storage and backup or on LoRaWAN radio network operation, etc.

Operating costs are based on the number of connected points, making it easy to scale and forecast.

CityTaps is currently running projects in **Niger, Burkina Faso, Senegal, Kenya, Rwanda, Ecuador, and Singapore.**
